

## PRODUCT RANGE

### BIO SOIL RANGE

**Equilibrium Farming™** is a concept that encompasses biological, biodynamic and organic farming principles and applications. It includes the logical and balanced use of organic and inorganic (chemical) plant nutrients in conjunction with organic nutrient chelators and soil conditioners like PhytoFulvic acid, (carbon containing molecules) help and amino acids and the biological portion in the form of micro-organisms to rectify soil structure and chemistry as well as biological soil life. By applying nature's logic, the utilization of plant nutrients is optimized to increase yield (harvest) and to ensure better quality of farm produce.

#### Fulvic acid organic soil ameliorants

LiquiCompost	SeedSpeed (Seed Treatment)
AminoBoost	PhytoFulvic 50LC (Liquid concentrate)
DynoSulf	PhytoFulvic 100WP (Wettable Powder)

#### Plant growth stimulating products

QCM360 (micro-organisms)  
OrganoZipp

### BIO PLANT RANGE: FOLIAR NUTRIENT PRODUCTS

**Plant Stress Management™** comprises the use of specialized leaf or foliar applied plant nutrients or fertilizers, plant growth stimulants as well as the anti-oxidant biochemical compounds to protect the membranes of cell organelles during stress conditions. The critically important organelles are chloroplasts (photosynthesis) and mitochondria (ATP energy supply) that needs protection against oxygen radical buildup and the resulting membrane damage and destruction during stress periods.

#### Plant Stress Management foliar plant nutrients

BioKelp	MultiFol (grain/oilseed crops)	Cal Train
BioPhos Repro	OptiGrove (Permanent crops/orchards)	MagTrain
DynoMoB	GardenLogic	KTrain
BioDynoCMZ	LawnLogic	ZincTrain
MultiPly		CopperTrain
SilKa (silica product)		ManTrain
		IronTrain

#### Wetter/ Spreader / Re-wetter (Humectant)

FulMax  
Unique PhytoFulvic acid product which has wetting, re-wetting and water surface tension breaking (dispersing) properties used to improve efficiency of foliar applied nutrients, herbicides\* and pesticides.

### FYTO RANGE (Soluble Dry Powder) Tailor-made single and multi-element prescription formulations.

The FYTO range is a unique and highly efficient renewable resource plant extract PhytoFulvic acid chelated macro and micronutrient product range. The range of highly soluble dry products are marketed as the FYTO range and is formulated using water soluble nutrients combined with spray dried PhytoFulvic 100 WP powder. The FYTO range competes directly with the expensive and low active ingredient EDTA chelated products. The FYTO products can also be combined and blended in any ratio of the different elements according to proper soil analysis quantification of macro and micro-nutrient deficiencies preferably using the 1:2 Water Extract soil analysis or a conventional chemical extraction analysis of the soil.

#### Plant Stress Management foliar plant nutrients

FYTO-PowerGro	FYTO-MicroPlex	FYTO-Fe	FYTO-Cal	FYTO-Cu
FYTO-Pecan	FYTO-Desalinize	FYTO-Zn	FYTO-Mn	FYTO-Bor
