 MANUFACTURED IN SOUTH AFRICA

FYTO-Bor is a highly effective Boron and PhytoFulvic Acid product that is completely soluble in water before application into the soil. The uptake and crop utilization of the Boron is improved due to the specific wetting properties of the Phytofulvic Acid, which limits leaching in sandy soils and improves root contact with the active ingredient and thus increases uptake.

PRODUCT PROPERTIES

Packaging	25 kg
Appearance	Brown/cream powder

GENERAL RECOMMENDATIONS

FYTO-Bor is compatible with most generally used fertilizers.

Do not use FYTO-Bor in strong alkaline solutions.

The total recommended volume should be equally divided between root flush periods during the season or a single application during the first root flush of the season.

Depending on the severity of deficiency, FYTO-Bor can be used at rates of 4 – 8kg/ha /season.

A solution of the recommended dosage should be made in at least 400ℓ of water for 4kg/ha and at least 800ℓ water for 8kg/ha. Do not exceed 2% (2kg/100ℓ water) solution strength.

For drenching the calculation for required volume should be made in terms of number of trees per ha.

The product can be applied through the irrigation system, with a tractor sprayer or especially young or newly planted trees, be applied as a drench at 2ℓ per young tree and up to 10ℓ for large trees.

COMPOSITION

Boron(B)	153g/kg
PhytoFulvic 100 WP	10%

STORAGE

The FYTO products should not be used in any other way than prescribed. Do not store in direct sunlight.

Storage temperature: 13°C - 25°C. Keep the bag closed after opening if the full 25 kg is not used.

It is hygroscopic and moisture will lead to the product becoming hard.

Contact your AgriLibrium Representative for crop specific recommendations.
